1.112.4 Configure Linux as a PPP client [3]

Description of Objective

1.112.1 Fundamentals of TCP/IP

1.112.1
Fundamentals of
TCP/IP
Weight 4

Geoff Robertson

Candidates should demonstrate a proper understanding of network fundamentals. This objective includes the understanding of IP-addresses, network masks and what they mean (i.e. determine a network and broadcast address for a host based on its subnet mask in “dotted quad” or abbreviated notation or determine the network address, broadcast address and netmask when given an IP-address and number of bits). It also covers the understanding of the network classes and classless subnets (CIDR) and the reserved addresses for private network use. It includes the understanding of the function and application of a default route. It also includes the understanding of basic internet protocols (IP, ICMP, TCP, UDP) and the more common TCP and UDP ports (20, 21, 23, 25, 53, 80, 110, 119, 139, 143, 161).

Key files, terms, and utilities include:

1.112.1 Fundamentals of TCP/IP

`/etc/services` — file mapping port numbers to names

`ftp` — FTP client program

`telnet` — telnet client program

`host` — program to test DNS servers

`ping` — program to test connectivity to other machines via ICMP

`dig` — program to test DNS servers

`traceroute` — program to test the path to a remote machine, showing routers along the way

`whois` — queries information about the owner of a domain

This objective includes the understanding of:

- ▶ IP-addresses, network masks and what they mean, i.e.,
 - ▶ determine a network and broadcast address for a host based on its subnet mask in “dotted quad” or abbreviated notation or
 - ▶ determine the network address, broadcast address and netmask when given an IP-address and number of bits.
