Configure BIOS Fundamental Settings [3]

(1.1) 101 Hardware & Architecture [11]

2.101.1 Configure BIOS Fundamental Settings [3]

2.101.2 Setup SCSI devices [2]

2.101.3 Setup different PC expansion cards [2]

2.101.4 Configure communication devices [2]

2.101.5 Set Up USB devices [2]

Configure BIOS Fundamental Settings [3]

Objective

Candidates should be able to configure fundamental system hardware by making the correct settings in the system BIOS. This objective includes a proper understanding of BIOS configuration issues such as the use of LBA on IDE hard disks larger than 1024 cylinders, enabling or disabling integrated peripherals, as well as configuring systems with (or without) external peripherals such as keyboards. It also includes the correct setting for IRQ, DMA and I/O addresses for all BIOS administrated ports and settings for error handling.

Configure Fundamental BIOS Settings [3]

Key files, terms, and utilities

The PC Firmware—BIOS

Responsible for bring the hardware to a state at which it is ready to boot an Operating System.

The PC Firmware—BIOS

Responsible for bring the hardware to a state at which it is ready to boot an Operating System.

- System reset and initialisation

The PC Firmware—BIOS

Responsible for bring the hardware to a state at which it is ready to boot an Operating System.

- System reset and initialisation
- Basic main memory test (RAM)

The PC Firmware—BIOS

Responsible for bring the hardware to a state at which it is ready to boot an Operating System.

- System reset and initialisation
- Basic main memory test (RAM)
- Test the presence of various devices

The PC Firmware—BIOS

Responsible for bring the hardware to a state at which it is ready to boot an Operating System.

- System reset and initialisation
- Basic main memory test (RAM)
- Test the presence of various devices
- On board peripheral selection

The PC Firmware—BIOS

Responsible for bring the hardware to a state at which it is ready to boot an Operating System.

- System reset and initialisation
- Basic main memory test (RAM)
- Test the presence of various devices
- On board peripheral selection
- Low level device configuration

The PC Firmware—BIOS

Responsible for bring the hardware to a state at which it is ready to boot an Operating System.

- System reset and initialisation
- Basic main memory test (RAM)
- Test the presence of various devices
- On board peripheral selection
- Low level device configuration
- Selection of boot devices

The PC Firmware—BIOS

Responsible for bring the hardware to a state at which it is ready to boot an Operating System.

- System reset and initialisation
- Basic main memory test (RAM)
- Test the presence of various devices
- On board peripheral selection
- Low level device configuration
- Selection of boot devices
- Locating an operating system

The PC Firmware—BIOS

Responsible for bring the hardware to a state at which it is ready to boot an Operating System.

- System reset and initialisation
- Basic main memory test (RAM)
- Test the presence of various devices
- On board peripheral selection
- Low level device configuration
- Selection of boot devices
- Locating an operating system
- The BIOS may have password access enabled

The PC Firmware—BIOS

Accessing BIOS Setup

The various vendors have different ways of entering the BIOS menu system

- Del
- F2
- Fn Setup
- Special Boot Floppy
-

The PC Firmware—BIOS

Boot devices

- Floppy
- CDROM / DVD
- IDE Disk
- SCSI Disk
- Network
- Zip / Jazz
- USB Disk

The PC Firmware—BIOS

Resource Assignment

- PC's have memory mapped I/O and devices must not have overlapping I/O Addresses

The PC Firmware—BIOS

Resource Assignment

- PC's have memory mapped I/O and devices must not have overlapping I/O Addresses
- Devices sharing interrupts such as `ttys0` and `ttys2` must not be used at the same time

The PC Firmware—BIOS

Resource Assignment

- PC's have memory mapped I/O and devices must not have overlapping I/O Addresses
- Devices sharing interrupts such as `ttys0` and `ttys2` must not be used at the same time
- Direct Memory Access (DMA) allows some devices to access memory directly, rather than via the CPU

The PC Firmware—BIOS

Resource Assignment

- PC's have memory mapped I/O and devices must not have overlapping I/O Addresses
- Devices sharing interrupts such as `ttys0` and `ttys2` must not be used at the same time
- Direct Memory Access (DMA) allows some devices to access memory directly, rather than via the CPU
- Some PCI controllers may have to be in a Bus Mastering Slot

The PC Firmware—BIOS

Resource Assignment

- PC's have memory mapped I/O and devices must not have overlapping I/O Addresses
- Devices sharing interrupts such as `ttys0` and `ttys2` must not be used at the same time
- Direct Memory Access (DMA) allows some devices to access memory directly, rather than via the CPU
- Some PCI controllers may have to be in a Bus Mastering Slot
- PCI devices may share a common interrupt

The PC Firmware—BIOS

Common Device Settings

Device	I/O Address	IRQ	DMA
ttyS0	3F8	4	NA
ttyS1	2F8	3	NA
ttyS2	3E8	4	NA
ttyS3	2E8	3	NA
lp0	378-37F	7	NA
lp1	278-27F	5	NA
fd0, fd1	3F0-3F7	6	2
fd2, fd3	370-377	10	3

The PC Firmware—BIOS

1023 Cylinder Limit

- Ten bit addressing of cylinders— $11\ 1111\ 1111_2 = 1023_{10}$

The PC Firmware—BIOS

1023 Cylinder Limit

- Ten bit addressing of cylinders— $11\ 1111\ 1111_2 = 1023_{10}$
- Large Block Addressing (LBA) used for disks larger than 1023 cylinders ($\approx 8\text{Gb}$)

The PC Firmware—BIOS

1023 Cylinder Limit

- Ten bit addressing of cylinders— $11\ 1111\ 1111_2 = 1023_{10}$
- Large Block Addressing (LBA) used for disks larger than 1023 cylinders ($\approx 8\text{Gb}$)
- The boot loader must be below cylinder 1024

The PC Firmware—BIOS

1023 Cylinder Limit

- Ten bit addressing of cylinders— $11\ 1111\ 1111_2 = 1023_{10}$
- Large Block Addressing (LBA) used for disks larger than 1023 cylinders ($\approx 8\text{Gb}$)
- The boot loader must be below cylinder 1024
- Older versions of LILO must have `/boot` (the kernel) entirely below cylinder 1024

The PC Firmware—BIOS

1023 Cylinder Limit

- Ten bit addressing of cylinders— $11\ 1111\ 1111_2 = 1023_{10}$
- Large Block Addressing (LBA) used for disks larger than 1023 cylinders ($\approx 8\text{Gb}$)
- The boot loader must be below cylinder 1024
- Older versions of LILO must have `/boot` (the kernel) entirely below cylinder 1024
- The Grub bootloader does not have these restrictions
