

**NMS**

```
graph LR; subgraph "agent device"; direction LR; A[agent] --- D[device]; end; A -- trap --> NMS[NMS];
```

The diagram illustrates a network management scenario. On the left is a large rectangular box labeled "NMS". To its right is a vertical rectangle divided into two sections: "agent" on the left and "device" on the right. A large, hollow arrow points from the "agent" section towards the "NMS" box. The word "trap" is written in the center of this arrow, indicating a message being sent from the agent to the NMS.

**trap**
